The formula for success begins with you. Add in challenging courses, hands-on experience, and dedicated faculty, and you end up with a Penn State education that will help you prepare for a future in science.
Our college will help you achieve the successful future that you want. We’re eager to share our passion for science and help you find yours—we’re here for you and your success.

How to achieve success depends on how you want to fit into your big picture—your own personal definition. While every science student has a different definition of success, they all share the benefits of recording and experiencing, and the need for exploring and understanding. We offer many academic opportunities for you, whether you know exactly which area of science you want to study or you’re still exploring. We would love to see what science means to you; your interests, your strengths, and your goals. With co-op and laboratory work, faculty and academic advisers learn your interests, your strong points, and your goals, helping you find the best ways of achieving success.

We’re eager to share our passion for science and help you find yours—we’re here for you and your success.

Faculty and academic advisers learn your interests, your strong points, and your goals, helping you find the best ways of achieving success.

Find Your Future Here

Why is the study of science so important today? Think about the challenges our world faces—health care issues, disease outbreaks, renewable energy, food supply concerns, the human genome project, our faculty concentrates on educating you and helping you to discover how you will fit into the world of science. Faculty and academic advisers learn your interests, your strong points, and your goals, helping you find the best ways of achieving success.
