Pathway to Stop Diabetes Research Awards

Call for Nominations—Now Open!

This is a limited submission. If you are interested in applying, please contact Lesley Moore at limitedsubs@psu.edu ASAP if you are interested as the downselect is underway.

Substantial, Sustained, Portable Funding

Today, it is not uncommon for researchers to spend a significant amount of their time writing grants. To us, this is time wasted. We want researchers to concentrate on chasing breakthroughs instead of chasing dollars.

Diabetes Research Career Initiator Award

Newly emerging scientists face numerous obstacles early in their careers, but none more daunting than securing the funding for their work to begin.

For post-doctoral talent on the cusp of their research careers, Diabetes Career Initiator Awards provide the means to establish independent careers, hire staff and—most importantly—focus completely on conducting their innovative research.

The two-part funding is designed to support the transition from trainee to independent investigator.

Diabetes Research Accelerator Award

Researchers pursuing high risk but promising projects often encounter difficulty in finding continuing financial support. This leads to delays in progress as resources are pulled away from research and applied to the search for funding.

For scientists early in their careers and for scientists interested in applying their expertise in a new field, Diabetes Research
Accelerator Awards provide the freedom to continue their work undistracted. This in turn will help to accelerate their research in those potentially novel areas that hold high promise for a breakthrough in the fight to Stop Diabetes®.
